Available for remote contract / B2B engagements

## SUMMARY

Game developer with 6 years of professional experience shipping commercial mobile and PC titles, now leading development in a four-person indie team building a commercial 3D horror narrative game in Unity — owning all programming plus most of the 3D art, audio, and level design. Master of Architecture: a rare combination of spatial/urban design expertise and engineering, proven in an EU-funded traffic and pedestrian simulation released on the Unity Asset Store. Early and heavy adopter of AI-assisted development (Claude Code, Unity MCP, Blender MCP).

## SKILLS

- **Engines & languages:** Unity (incl. experimental ECS/DOTS) with C#; Unreal Engine 5 with C++ and Blueprints; GameMaker
- **Gameplay engineering:** mechanics prototyping, physics and movement controllers, shaders, algorithm design (pathfinding, collision avoidance), MVVM architecture, design patterns for clean, scalable code
- **AI-assisted development:** daily production use of Claude and Claude Code with Unity MCP and Blender MCP; built a cross-machine shared memory system for project agents
- **Content creation:** 3D modelling and texturing (Blender), sound, level design and setup
- **Other:** Git, live ops, platform porting (Steam, Facebook Gameroom), mentoring junior developers

## EXPERIENCE

### Independent Game Developer · Radium Polonium

2016 – present · full-time since 09.2025

- Leading development of an unannounced commercial 3D retro-style horror narrative game in Unity, in a team of four, targeting a Steam release.
- Sole programmer: all gameplay systems, tooling, and build pipeline.
- Creating the majority of 3D models, textures, and sound; responsible for level setup and design.
- Designed the game's world model, adapting my Master of Architecture thesis project into a playable environment.
- Built an AI-assisted production pipeline (Claude Code, Unity MCP, Blender MCP, shared agent memory across machines) that multiplies a small team's output.
- Earlier (2016 – 2025, alongside studies and full-time work): four game jams and multiple released PC/WebGL games in Unity, Unreal Engine 5, and GameMaker — playable at [radiumpolonium.itch.io](https://radiumpolonium.itch.io)

### Game Developer · Game Factory

10.2019 – 09.2025

- **Live 4X strategy title (co-development)** (04.2025 – 09.2025) — contract work for a major European strategy-games group — porting a live 4X title with a large active player base to the client's proprietary Unity ECS framework; debugging and stabilisation (commercial).
- **Colorami** (05.2025 – 08.2025) — feature development on a released GameMaker title (commercial).
- **Bricks n Balls** (12.2023 – 08.2025) — mobile physics brick-crusher — implemented gameplay, social, and economy features using MVVM architecture (commercial).
- **Internship supervision** (09.2022 and 07.2023) — mentored intern teams across Unity and Unreal Engine tracks, guiding 3–4 student programmers — each team shipped a complete game in one month.
- **Mobile 4X prototype** (2022 – 2023) — prototyped core mechanics, optimised frontend-backend communication (commercial).
- **The City** (11.2021 – 11.2023) — EU-funded research project simulating vehicle and pedestrian behaviour for games and simulators; designed and implemented behaviour algorithms in experimental Unity ECS. Released as “The City: traffic and pedestrians ECS system” on the Unity Asset Store.
- **Psych!** (07.2020 – 10.2021) — mobile party trivia game — live ops: new features, plugin integrations, data-driven fixes (commercial).
- **Poker World** (03.2020 – 07.2020) — ported a live mobile poker game to Steam and Facebook Gameroom; added new features (commercial).
- **Sweet Escapes** (10.2019 – 05.2020) — mobile collapse game — social features and seasonal content (commercial).

## EDUCATION

### Master Engineer of Architecture · West Pomeranian University of Technology

2012 – 2019

- Architecture and Urban Planning; thesis world model adapted as the environment of a commercial game currently in production.
